...ABSTRACT of products from the merchants. The client is enabled to make one transaction with one **merchant** dependent upon the results of another transaction with another **merchant** . More specifically, each item that is available from any **merchant** and is selected by a customer using the client is represented at the client as...

...the current customer is actively using it. A conditional state sends a signal to the **merchant** to assist in contacting another **merchant** in order to **cancel** a **previous transaction** that the other **merchant** had with the current customer.

...SPECIFICATION a Web client wants to cancel a purchase because a better bargain with some other **merchant** has been found.

More specifically, a client system, used by a customer (otherwise referred to...

...out transactions between the customer and the merchants. Each item within the inventory of a **merchant** is represented by an object or other representation. The client system displays a copy of...

...the client from multiple merchants across multiple servers. When an item is selected from a **merchant** , the customer also selects a state of the object representing the item. If an item is available from a **merchant** , the state of the object at the **merchant** reflects this availability. When the customer selects an available item, the customer can select a...

...purchase or hold the item only if a previous transaction with the same or different **merchant** can be cancelled, e.g., "conditional" state.

As the item and state are selected by...

...and client systems.

The state referred to above as the "conditional" state indicates to the **merchant** owning the subject item that the customer desires to purchase the subject item if a **previous transaction** is able to be **cancelled**. The customer sends to the owning **merchant** an identification of the previous **merchant** and an identification of the item purchased in the previous transaction. The owning **merchant** contacts the previous **merchant** to cancel the identified transaction. The owning **merchant** may even offer an incentive to the previous **merchant** to entice the previous **merchant** to **cancel** the **previous transaction**. The incentive may cover the transaction costs, and perhaps more, that the previous owner incurred. The owning **merchant** provides the incentive to gain the sale and the customer's business. If the **previous transaction** is **cancelled**, a notice is sent to the client which changes the state of the objects to indicate that the **previous transaction** was **cancelled** and that the condition on the other item has been met such that the item...

...order cancellation", and by providing methods for "dependent transactions" in which a transaction with one **merchant** depends upon transactions made earlier with a different **merchant**; b) product transfers between sellers ...the shopper to shop from many merchants rather than having discrete transactions with each separate **merchant**. One embodiment utilizes a shopping cart which spans different merchants on different Web servers which...

...transaction with a second Web server;

Fig. 4 illustrates a transaction flow wherein a first **merchant**, pursuant to a request by the buyer, provides incentive to a second **merchant** to **cancel** a **previous transaction** with the buyer;

Fig. 5 illustrates inventory items represented as objects in a network of e-commerce merchants and clients;

Figs. 6A-6C illustrate the process flow at a **merchant**'s Web server for changing the state of an object depending upon the client's...the object to the client 672. The Web server determines the identity of the other **merchant**, buyer, and item from the request, 673. The Web server sends a message to the other **merchant** to cancel the item with the buyer, 674. When the Web server receives confirmation that the other **merchant** has **cancelled** the **previous transaction** with the buyer, 675, then the state is changed from conditional to buy or hold...

...CLAIMS given instance in time; and

selecting, by the buyer, a desired item from a certain **merchant** with a selected associated state indicating that the buyer desires to purchase the desired item if a previous transaction which bought another item from another **merchant** can be cancelled.

3. The method of claim 2 further comprising:

sending, from the client, to the certain **merchant** an identification of the other **merchant** and the other item; and
receiving a notification that the **previous transaction** is **cancelled**

4. The method of claim 2 wherein the selected associated state causes an indication to be sent from the client to the certain **merchant** to lock specific data associated with the desired item from being accessible by a different...

...wherein the associated state is changed, upon receipt of the notification, to indicate that the **previous transaction** is **cancelled**.

7. The method of claim 3 wherein the other item has a displayed other representation...

...the client computer which becomes automatically deleted, upon receipt of

the notification indicating that the **previous transaction** is **cancelled** .

8. A client computer system enabled to communicate over a network with at least one...

...in time; and

means for selecting, by the buyer, a desired item from a certain **merchant** with a selected associated state indicating that the buyer desires to purchase the desired item if a previous transaction which bought another item from another **merchant** can be cancelled.

9. The system of claim 8 further comprising:

means for sending, from the client, to the certain **merchant** an identification of the other **merchant** and the other item; and
means for receiving a notification that the **previous transaction** is **cancelled** .

10. The system of claim 8 or 9 wherein the selected associated state causes an indication to be sent from the client to the certain **merchant** to lock specific data associated with the desired item from being accessible by a different...

Detailed Description

... car that match the second customers requirements in their warehouses 204, 206; 208. The multi- **agent** system will now try to generate for the first customer an alternative offer, which would...

...delivering the red Mercedes 202 to the second customer.

To achieve this, the second order **agent** 210 sends a message to the Car **agent** 202 (i.e. red Mercedes) with an offer, where the compensation is not specified, to induce it to change the customer. The Car **agent** 202, in turn, sends a message to the first order **agent** 212 asking for permission to change the customer.

In response, the first order **agent** 212 considers the situation taking into account its own and the car owner's interests. First, the first order **agent** 212 turns to the Brazilian dealer 214 to find out how fast it would be...

...In

accordance with a simple scenario strategy (see later) of proportional compensation, the Order I **Agent** asks the second order **agent** 210 for a 50% discount as compensation for the doubling of ...the delivery period of the car. To obtain permission for the deal, the first order **agent** 212 contacts the first customer, for example, by ringing his WAP phone, and offers a...

...agreement to wait another month. If the first customer agrees to wait another month, the **first order agent** 212 **cancels** the booking of the initial red car 202 and books a new car 220. The second order **agent** 210 in turn books the car 202 for the price which now equals its 000 = 75,000 mu.

Now, the second order **agent** 210 has to negotiate with an airliner for the delivery of the car back...

Detailed Description

Detailed Description

... of a portion of a polymorphism/risk table is shown in Table 2.

Gene Polymorphism **Agent** Phenotype Risk

CYP2D6 Duplication Debrisoquine ...TPMT G460A Mereaptopurin Poor Limited risk

e - 1 Omg/day metabolizer I

Like the gene/ **agent** table, as more information regarding **agent** /gene associations are accepted, the table will be updated and improved. Also, values for

polymorphisms invention. Also, in one of many

alternative implementations, the data from the gene/ **agent** table and the risk/polymorphism table could be incorporated into a single data structure.

1...In field 60, the patient's name is displayed and, in field 62, the clinical **agent** input at step 29 is displayed.

In the main field 64, the message generated by...of the clinical action may be delayed or canceled, additional therapy - 14 scheduled, an alternative **agent** may be selected, or the patient may be referred to a clinical counselor. By way of example, with reference back to FIG. 5, the clinical action of **canceled** the **previous order** is displayed at box 65. The system is default to cancel the action absent input...the contrary. Also, as displayed in FIG. 5, the system may display an alternative clinical **agent** within field 66 that is not associated with the genetic mutation of the patient.

At this step of the system, additional information regarding the association of the clinical **agent** and the genetic mutation may be obtained by selected the "MORE INFO" button designated at...gene encoding thiopurine methyltransferase (TPMT) that impairs the ability to metabolize mercaptopurine (MP), a common **agent** used in chemotherapy treatments. Since the **agent** is used at near-toxic levels, patients exhibiting the mutation often die from the chemotherapy...

...the present invention, a clinician such as an oncologist would input MP as a possible **agent** at step 29. Next, the **agent** /gene association

table would be accessed at step 32. At step 34, the system would...

Description of the Invention:

...zero of each of the PI compensators 16a through 16d is set so as to **cancel** the **first - order** lag pole. Thus, the operating amount obtained by feeding back the output of a motional mode selector 7A, which is related to acceleration, to the section preceding a motional mode **distributor** 9 via gain compensators 17[sub]x, 17[sub]y, and 17[sub]z acts...Hence, the integration characteristic is restored by inserting the PI compensators 16a through 16d which **cancel** the pole of the **first - order** lag system at the section before the system to which the pressure

feedback has been...

...function can be implemented in the frequency band without inserting the PI compensators 16 for **canceling** the pole of the **first - order** lag characteristic resulting from the application of the pressure feedback. For instance, the system to...this case, the additional PI compensators are inserted at the section before the motional mode **distributor** 9 and also before the adding point of the outputs of the stage reaction force ...16[_{sub}]x, 16[_{sub}]y, and 16[_{sub}]z is set so as to **cancel** the poles of the **first - order** lag. This enables the operating amount, which is obtained by feeding the output of the motional mode selector 7A related to acceleration to the section preceding the motional mode **distributor** 9 via the gain compensators 17[_{sub}]x, 17[_{sub}]y, and 17[_{sub}]z preceding the motional mode **distributor** 9. The signal (not shown) when the XY stage 13 is driven in the X...

...take the form of the phase lead compensators; the zero is set such that it **cancels** the lag constant as the **first - order** lag system of the transfer function of the pressurizing force feedback system. The poles of ...

...the detected signal is applied to the section, which is located before the motional mode **distributor** 9 and to which motional mode drive signals d[_{sub}]x and d[_{sub}]y...

Description of the Invention:

...the terminal equipment 200, the order manager 121, when started alone, accepts information about the **cancellation** of an order and transmits it to the communications equipment 152 of the provider...it stores a database 221 for storing received order information, a program 222 for accepting **cancellation**, a program 223 for controlling communications, a program 220 for generating product information to be... ending the processing by the order manager 121, and 322 designates a button for instructing **cancellation** of the ordered product displayed in the order list display section 324...the product list display section 324 with the pointing device 103, and then operates the **cancellation** button 322. Receiving the operation, the CPU 107 executes the order manager 121 to delete...The terminal equipment 100 receives and displays the information, and stores the information needed for **cancellation** of or inquiry about the order at step S4030The present embodiment can also perform the **cancellation** of the order...

...To **cancel** the order, the client starts the order manager 121 by manipulating the pointing device 103...

...The client selects with the pointing device 103 an item to be **canceled** in the order list displayed on the display screen at step S2010. The CPU 107 retrieves from the HDD 105 the information needed for the **cancellation** such as the name and address of the client using the selected order number and product name as a key. Receiving from the client the **cancellation** confirmation through the **cancellation** button, the CPU 107 generates transmitted **cancellation** information from the information instructing the **cancellation** and the retrieved information, and transmits it to the communications equipment 152 of the provider...

...200 of the vendor accesses the communications equipment 152 of the provider, and retrieves the **cancellation** information, if there is any, and stores it in the HDD 205. Alternatively, the **cancellation** information may be transmitted from the communications equipment 152 of the provider to the terminal...

...the CPU 207 executes, in accordance with the procedure as shown in FIG. 10, a **cancellation** processing by retrieving order information stored in the HDD 205 at step S5000, and by deleting or revising the order information using the **cancellation** information at step S5010. Then, it transmits a reply message to the terminal equipment 100...

...the database stored in the HDD 105 at step S2030 of FIG. 7, executes the **cancellation** processing at step S2040, and updates the data of the order manager at step S2050. Subsequently, it displays a message indicative of the completion of the **cancellation** on the display 102 at step S2060, thereby closing the procedure as shown in FIG. 7. If the terminal equipment 200 of the vendor makes a decision that the **cancellation** cannot be accepted, it sends a message saying that as shown

Search Report from Ginger R. DeMille

in FIG. 13, and...

...As described above, the present embodiment **cancels** the order through the WAN 153, which reduces the charge for communications on the client...

...of a marketing system in accordance with the present invention, which is suitable for placing **orders** with a **plurality** of **vendors**. In FIG. 14, portions corresponding to those of FIG. 1 are designated by the same ...9) Although the **cancellation** of the order is carried out while the terminal does not access the service provider...terminal accesses the service provider. In this case, the terminal displays a window for the **cancellation** so that the client inputs information required for the **cancellation**. Then, the **cancellation** information is directly transmitted to the terminal of the vendor in response to transmission instructions...

...of the client through the WAN. This also applies in the case of receiving the **cancellation** information. When there is no stock or the **cancellation** of the order is unacceptable, it is preferable to return to the client the information...network 154 of the foregoing embodiment is also applicable for receiving from the client the **cancellation** information, inquiry about the product, charge data, or other confidential data...

...ABSTRACT to make one transaction with one merchant dependent upon the
results of another transaction with **another merchant** . More
specifically, each item that is available from any merchant and is
selected by a...

...the current customer is actively using it. A conditional state sends a
signal to the **merchant** to assist in contacting **another merchant** in
order to **cancel** a previous transaction that the other **merchant** had
with the current customer.

...SPECIFICATION a purchase) is often a necessity in real life scenarios.
Currently, many merchants allow for **order cancellation** if a product
has not been shipped. However, this typically involves calling the
merchant . Likewise some e-commerce merchants allow for electronic

Search Report from Ginger R. DeMille

cancellation if a product has not been shipped. Furthermore, if a buyer cancels a transaction and then goes to buy from **another merchant**, the buyer may find that by the time the transaction is cancelled the merchandise is...
